

# CLEANING & MAINTENANCE

PVCu windows are extremely durable and long lasting. As a result, they will only require occasional cleaning and basic maintenance.

The cleaning of PVCu sections, gaskets and hardware should be carried out periodically to maintain it's appearance and function. The frequency of this maintenance will depend on the local conditions; i.e. products installed in an industrially polluted or coastal area are likely to require more frequent cleaning.

VEKA supply cleaning and maintenance kits for both white and laminated coloured windows. These kits contain everything that's required to keep your windows looking good and functioning as they should:

## VEKANOL – 500ml

Intensive cleaner for PVCu windows and doors. Put a little VEKANOL cleaner on a clean, soft cloth and thoroughly rub the soiled frames before rinsing with clean water. In order to preserve the longevity of the surface, it is recommended to follow with VEKA Protection Plus.

## VEKA Protection Plus (Konservierer) – 500ml

Effective protection for PVCu windows and doors against dust and pollutants. Put a little VEKA Protection Plus on a clean, soft cloth and apply evenly to the frames being treated. Leave on for a short time and rub with a soft, clean cloth.

## VEKA Gasket Care (Dichtungspflege) – 100ml

Conditioning agent for VEKA gaskets. Following cleaning and rinsing with VEKANOL, gaskets should be dried before applying a small amount of VEKA Gasket Care with a clean, soft cloth.

## VEKA Special Lubricant (Spezialfett) – 50ml

Use a small amount whenever required to keep all visible hardware (i.e. hinges, locking mechanism etc) working smoothly.

## VEKA Oil Spray (Sprühöl) – 100ml

Use one short spray of VEKA Oil Spray to penetrate more difficult to reach areas of hardware and keep them working smoothly. Also included, along with all of the above, are two soft and reuseable cloths.

### Extras:

#### Solvent Cleaner (S20 UVA) – 1000ml

Weather protection and anti-static agent. Optional use prior to VEKANOL and VEKA Protection Plus.

### ORDER CODES:

- White product kit (base profile): 14611600000
- Coloured / Laminated product kit (including SPECTRAL): 14612300000
- Solvent Cleaner (S20 UVA): 14611200000

### Please Note:

Modern window fixings are durable, simple and work consistently without complications provided they are maintained at least once a year using the VEKA Special Lubricant and VEKA Spray Oil within the kit.

External and decorative hardware such as handles, hinges, key cylinders etc tend to have polished surfaces which can be restored by wiping over with mild soapy water before thoroughly drying and buffing with a dry soft cloth. Care should be taken not to scratch decorative finishes with jewellery such as rings, keys, or by hanging items from handles.
